SUMMARY

Backend engineer with 3 years building TypeScript and Node.js services for distributed e-commerce and marketplace platforms. Strong in GraphQL and REST API design, NoSQL data modeling (MongoDB), Elasticsearch/Atlas Search, and decomposing monoliths into independently deployable NestJS microservices. Cut MongoDB query latency from ~800ms to ~200ms; shipped catalog, checkout, payment, search, and recommendation systems for marketplaces with 20,000+ products and hundreds of concurrent users.

SKILLS

Languages: JavaScript, TypeScript

Frameworks: Node.js, Nest.js, GraphQL, REST APIs, Async Processing, React.js, Next.js

Databases: MongoDB, NoSQL, Elasticsearch, Atlas Search

Tools: Docker, Linux, Dokploy, AWS S3, Git, Cursor, Claude, MCP

Other: Distributed Systems, Microservices, Search Systems, Recommendation Systems, API Design, Transactional E-Commerce Systems

EXPERIENCE

Software Developer — Evolvier Technologies

Kochi, Kerala · April 2023 – April 2026

TypeScript, Node.js, NestJS, GraphQL, REST APIs, MongoDB, Elasticsearch, Atlas Search, Docker, Git

- Engineered backend services, GraphQL and REST APIs, and transactional workflows for distributed e-commerce platforms using TypeScript, Node.js, NestJS, and MongoDB (NoSQL).
- Migrated cart, product management, and authentication workflows from monolithic applications into independently deployable NestJS microservices, improving scalability and deployment isolation.
- Optimized MongoDB indexing strategies and aggregation pipelines, cutting query latency from ~800ms to ~200ms (~75%) and improving API responsiveness across transactional and administrative workflows.
- Designed search and discovery systems with Elasticsearch and Atlas Search: index architecture, field mappings, ingestion pipelines, autocomplete, and catalog search optimization.
- Built product synchronization pipelines integrating Meta Commerce APIs, processing batches of ~500 records per run with retry handling, transformation workflows, and rate limiting.
- Implemented centralized validation, reusable backend modules, and error-handling to improve API reliability, maintainability, and development velocity.

PROJECTS

MyNeibo

Multi-partner marketplace commerce platform.

Meteor.js, TypeScript, Nest.js, GraphQL, MongoDB, Elasticsearch, Gorse, JWT Authentication, Docker Compose

- Enhanced commerce workflows for a marketplace platform with 50+ active business partners, 20,000+ products, and hundreds of concurrent users.
- Migrated cart, product management, and authentication from a Meteor.js monolith into independently deployable NestJS microservices.
- Developed GraphQL-powered backend services and JWT-based authentication for modular commerce operations.
- Built Elasticsearch indexing and asynchronous ingestion pipelines supporting 20,000+ products, and led a version migration redesigning index mappings and search data models to improve relevance.
- Designed recommendation data models and backend APIs for a Gorse-powered service delivering personalized homepage recommendations.

Quikzii

Multi-domain e-commerce platform.

TypeScript, Nest.js, Next.js, MongoDB, Atlas Search, AWS S3, Stripe, Docker, Dokploy

- Designed backend workflows, MongoDB data models, and APIs for a multi-domain e-commerce platform: catalog, checkout, subscriptions, returns, order cancellation, and customer operations.
- Built a product synchronization service from scratch integrating Meta Commerce catalogs (~500 records per run, 5,000+ searchable products) with retry handling, transformation pipelines, and rate limiting.
- Implemented Atlas Search for 5,000+ products: index configuration, field mappings, autocomplete, and filtering.
- Built multi-warehouse inventory and product-assignment workflows and backend reporting APIs for commerce analytics dashboards.

EDUCATION

MG University (KMM College)

B.Sc. Computer Science · CGPA 9.06/10.0 · Ranked 3rd in University Merit List · May 2023
